QUALIFICATION OBJECTIVES

The objective of the OTHM Level 4 Diploma in Information Technology is to provide learners with an excellent foundation for a career in a range of organisations. It is designed to ensure that each learner is 'business ready': a confident, independent thinker with a detailed knowledge of Information Technology, and equipped with the skills to adapt rapidly to change.

The qualification is ideal for those who have started, or are planning to move into, a career in private or public sector business. Successful completion of the Level 4 Diploma in Information Technology will provide learners with the opportunity to progress to further study or employment.

QUALITY, STANDARDS AND RECOGNITIONS

OTHM Qualifications are approved and regulated by Ofqual (Office of Qualifications and Examinations Regulation). Visit the register of Regulated Qualifications.

OTHM has progression arrangement with several UK universities that acknowledges the ability of learners after studying Level 3-7 qualifications to be considered for advanced entry into corresponding degree year/top-up and Master's/top-up programmes.

REGULATORY INFORMATION

Qualification Title	OTHM Level 4 Diploma in Information Technology
Ofqual Reference Number	603/3613/4
Regulation Start Date	08/09/2018
Operational Start Date	10/09/2018
Duration	1 Year
Total Credit Value	120
Total Qualification Time (TQT)	1200 Hours
Guided Learning Hours (GLH)	480 Hours
Sector Subject Area (SSA)	06.1 ICT practitioners
Overall Grading Type	Pass / Fail
Assessment Methods	Coursework
Language of Assessment	English

EQUIVALENCES

OTHM qualifications at Level 4 represent practical knowledge, skills, capabilities and competences that are assessed in academic terms as being equivalent to Higher National Certificates (HNC) and Year 1 of a three-year UK Bachelor's degree programme.

QUALIFICATION STRUCTURE

The OTHM Level 4 Diploma in Information Technology consists of 6 mandatory units for a combined total of 120 credits, 1200 hours Total Qualification Time (TQT) and 480 Guided Learning Hours (GLH) for the completed qualification.

Unit Ref. No.	Unit title	Credit	GLH	TQT
A/617/2265	Programming Foundations	20	80	200
F/617/2266	Systems Analysis and Design	20	80	200
J/617/2267	Web and Multimedia Applications	20	80	200
L/617/2268	Computer and Network Technology	20	80	200
R/617/2269	Software Development	20	80	200
J/617/2270	Managing Business Information	20	80	200

DEFINITIONS

Total Qualification Time (TQT) is the number of notional hours which represents an estimate of the total amount of time that could reasonably be expected to be required in order for a Learner to achieve and demonstrate the achievement of the level of attainment necessary for the award of a qualification.

Total Qualification Time is comprised of the following two elements -

- a) the number of hours which an awarding organisation has assigned to a qualification for Guided Learning, and
- b) an estimate of the number of hours a Learner will reasonably be likely to spend in preparation, study or any other form of participation in education or training, including assessment, which takes place as directed by but, unlike Guided Learning, not under the Immediate Guidance or Supervision of a lecturer, supervisor, tutor or other appropriate provider of education or training.

(Ofgual 15/5775 September 2015)

Guided Learning Hours (GLH) is defined as the hours that a teacher, lecturer or other member of staff is available to provide immediate teaching support or supervision to a student working towards a qualification.

Credit value is defined as being the number of credits that may be awarded to a Learner for the successful achievement of the learning outcomes of a unit. One credit is equal to 10 hours of TQT.

ENTRY REQUIREMENTS

For entry onto the OTHM Level 4 Diploma in Information Technology qualification, learners must possess:

- Relevant NQF/QCF/RQF Level 3 Diploma or equivalent
- Learner must be 18 years or older at the beginning of the course
- **English requirements:** If a learner is not from a majority English-speaking country must provide evidence of English language competency. For more information visit English Language Expectations page.

PROGRESSIONS

Successful completion of Level 4 Diploma in Information Technology provides learners the opportunity for a wide range of academic progressions including OTHM Level 5 Diploma in Information Technology. As this qualification is approved and regulated by Ofqual (Office of the Qualifications and Examinations Regulation), learners are eligible to gain direct entry into the second year of a three-year UK Bachelor's degree. For more information visit <u>University Progressions</u> page.

DELIVERY OF OTHM QUALIFICATIONS

OTHM do not specify the mode of delivery for its qualifications, therefore OTHM Centres are free to deliver this qualification using any mode of delivery that meets the needs of their Learners. However, OTHM Centres should consider the Learners' complete learning experience when designing the delivery of programmes.

OTHM Centres must ensure that the chosen mode of delivery does not unlawfully or unfairly discriminate, whether directly or indirectly, and that equality of opportunity is promoted. Where it is reasonable and practicable to do so, it will take steps to address identified inequalities or barriers that may arise.

Guided Learning Hours (GLH) which are listed in each unit gives the Centres the number of hours of teacher-supervised or direct study time likely to be required to teach that unit.

ASSESSMENT AND VERIFICATION

All units within this qualification are internally assessed by the centre and externally verified by OTHM. The qualifications are criterion referenced, based on the achievement of all the specified learning outcomes.

To achieve a 'pass' for a unit, learners must provide evidence to demonstrate that they have fulfilled all the learning outcomes and meet the standards specified by all assessment criteria. Judgement that the learners have successfully fulfilled the assessment criteria is made by the Assessor.

The Assessor should provide an audit trail showing how the judgement of the learners' overall achievement has been arrived at.

Specific assessment guidance and relevant marking criteria for each unit are made available in the Assignment Brief document. These are made available to centres immediately after registration of one or more learners.

OPPORTUNITIES FOR LEARNERS TO PASS

Centres are responsible for managing learners who have not achieved a Pass for the qualification having completed the assessment. However, OTHM expects at a minimum, that centres must have in place a clear feedback mechanism to learners by which they can effectively retrain the learner in all the areas required before re-assessing the learner.

RECOGNITION OF PRIOR LEARNING AND ACHIEVEMENT

Recognition of Prior Learning (RPL) is a method of assessment that considers whether learners can demonstrate that they can meet the assessment requirements for a unit through knowledge, understanding or skills they already possess and do not need to develop through a course of learning.

RPL policies and procedures have been developed over time, which has led to the use of a number of terms to describe the process. Among the most common are:

- Accreditation of Prior Learning (APL)
- Accreditation of Prior Experiential Learning (APEL)
- Accreditation of Prior Achievement (APA)
- Accreditation of Prior Learning and Achievement (APLA)

All evidence must be evaluated with reference to the stipulated learning outcomes and assessment criteria against the respective unit(s). The assessor must be satisfied that the evidence produced by the learner meets the assessment standard established by the learning outcome and its related assessment criteria at that particular level.

Most often RPL will be used for units. It is not acceptable to claim for an entire qualification through RPL. Where evidence is assessed to be only sufficient to cover one or more learning outcomes, or to partly meet the need of a learning outcome, then additional assessment methods should be used to generate sufficient evidence to be able to award the learning outcome(s) for the whole unit. This may include a combination of units where applicable.

EQUALITY AND DIVERSITY

OTHM provides equality and diversity training to staff and consultants. This makes clear that staff and consultants must comply with the requirements of the Equality Act 2010, and all other related equality and diversity legislation, in relation to our qualifications.

We develop and revise our qualifications to avoid, where possible, any feature that might disadvantage learners because of their age, disability, gender, pregnancy or maternity, race, religion or belief, and sexual orientation.

If a specific qualification requires a feature that might disadvantage a particular group (e.g. a legal requirement regarding health and safety in the workplace), we will clarify this explicitly in the qualification specification.

UNIT SPECIFICATIONS

PROGRAMMING FOUNDATIONS

Unit Reference Number	A/617/2265
Unit Title	Programming Foundations
Unit Level	4
Number of Credits	20
Total Qualification Time	200 hours
Mandatory / Optional	Mandatory
SSAs	06.1 ICT practitioners
Unit Grading Structure	Pass / Fail

Unit Aims

The aim of this unit is to give learners a basic understanding of Object-oriented programming languages and how to produce effective code. It also enables technical staff who are not programmers to gain a perspective of software development. The course is language neutral and teaches general concepts.

Learning Outcomes and Assessment Criteria

Le	arning Outcomes-	Assessment Criteria-
Th	e learner will:	The learner can:
1.	Understand the basic	1.1 Explain the concept of an algorithm.
	principles of algorithms.	1.2 Describe common algorithmic techniques and solutions.
		1.3 Create a flowchart from an algorithm.
2.	Understand the basic	2.1 Describe computer programming principles.
	principles of computer	2.2 Summarise the historical development of computer
	programming.	programming.
		2.3 Explain major components of a programming language.
		2.4 Compare the strengths and limitations of modern computer
		programming languages.
3.	Understand the basics	3.1 Explain the benefits of object oriented design.
	of an Object-oriented	3.2 Evaluate when to use Object-oriented design
	Programming language.	methodology.
		3.3 Explain how objects are used in Object-oriented
		programming.
		3.4 Explain the steps in creating an Object-oriented program.
		3.5 Explain how to compile a program and debug codes.
4.	Be able to code and	4.1 Design object oriented programs involving multiple objects.
	compile software using	4.2 Explain the impact of style on developing and maintaining
	a choice of object-	programs.
	oriented Programming	4.3 Develop programs using best practice.
	language.	4.4 Implement, test and debug solutions.

SYSTEMS ANALYSIS AND DESIGN

Unit Reference Number	F/617/2266
Unit Title	Systems Analysis and Design
Unit Level	4
Number of Credits	20
Total Qualification Time	200 hours
Mandatory / Optional	Mandatory
SSAs	06.1 ICT practitioners
Unit Grading Structure	Pass / Fail

Unit Aims

The aim of this unit is to develop learners' awareness of analysis and design in an organisational context. The unit introduces various techniques used within systems analysis and design and the methodologies used in the system development process.

Learning Outcomes and Assessment Criteria

Learning Outcomes- The learner will:		essment Criteria-
Understand the principle systems analysis and de	s of 1.1	learner can: Explain how systems analysis and design fits in to the software development life-cycle. Explain the components of systems analysis. Evaluate different approaches to system analysis and design. Evaluate system design requirements.
Understand system desi methodologies and mod		Explain system design concepts. Evaluate different system design methodologies including object-oriented
3. Understand the human computer interface.	3.1 3.2	Explain the principles of HCI. Evaluate HCI methodologies.
Be able to produce a system design using modelling techniques.	stem 4.1 4.2 4.3	Create a system design document. Produce a model of a software system. Produce a security and control design.

Topic	Course coverage
Learning Outcome 1	 Basic definitions and motivations of HCI, including history, theories, interaction paradigms, design principles and models. User centred design methods comprising user studies Design approaches for interfaces and interaction Quality factors Evaluation methods Techniques for data analysis. Research frontiers of HCI, including accessibility, universal design, and pervasive computing (ubiquitous, mobile and wearable applications).

	 Lifecycle models: understanding and use of predictive (Waterfall, Prototyping, RAD) and adaptive (Spiral, Agile, DSDM) software development models. Lifecycle stage and connectivity: feasibility study, analysis,
	design, implementation, testing, review or analysis, design, implementation, maintenance, planning; requirements traceability.
	Test and integration: building test environments; developing test harnesses; black box/white box testing; incremental
	testing; acceptance test and integration approaches; changeover strategies, trials and Go-Live prerequisites.
	 Prototyping methodology End user categorisations, classifications and behaviour
	 modelling techniques. Agile, Cleanroom, Incremental, Prototyping, Spiral V model, Waterfall.
	Hard and soft system methodologies Object-oriented modelling.
Learning Outcome 2	Information systems types: Business information systems, decision support systems, management information systems, strategic/executive information systems, office information
	systems, transaction processing systems, expert systems, global information systems, data warehouse systems,
	 enterprise systems, enterprise resource planning systems, integrated information systems. Categories of information systems: operational, tactical and
	strategic information systems.
Learning Outcome 3	 Information and data: Definition of information and data, sources of information, information requirements and the needs for information at different levels within an organisation; storing information and its importance with regard to security, accuracy and relevance; outputs e.g. payroll, invoicing,
	ordering, bookings, stock control, personnel records, goods
	 ordering, bookings, stock control, personnel records, goods tracking, decision-making, marketing, customer service. Management information: Reports e.g. sales report, college enrolment statistics, marketing analysis (brick v click), trends in the market, competition and market share, - management of
	 ordering, bookings, stock control, personnel records, goods tracking, decision-making, marketing, customer service. Management information: Reports e.g. sales report, college enrolment statistics, marketing analysis (brick v click), trends in the market, competition and market share, - management of computer systems, staffing, maintenance, project management and scheduling.
	 ordering, bookings, stock control, personnel records, goods tracking, decision-making, marketing, customer service. Management information: Reports e.g. sales report, college enrolment statistics, marketing analysis (brick v click), trends in the market, competition and market share, - management of computer systems, staffing, maintenance, project management and scheduling. WEB AND MULTIMEDIA APPLICATIONS

Unit Reference Number	J/617/2267
Unit Title	Web and Multimedia Applications
Unit Level	4
Number of Credits	20
Total Qualification Time	200 hours
Mandatory / Optional	Mandatory
SSAs	06.1 ICT practitioners
Unit Grading Structure	Pass / Fail

Unit Aims

The aim of this unit is to provide learners with an understanding of current design technology and the practices and tools used. The learner will develop the ability to create websites and gain confidence for the next step in a more advanced web development or design course or specialisation.

Learning Outcomes and Assessment Criteria

Le	arning Outcomes-	Assessment Criteria-		
	e learner will:		learner can:	
1.	1. Understand web design technology.		Explain modern web development technologies and frameworks.	
	5,7	1.2 Evaluate the impact of common web development technologies and frameworks on website design, functionality and management.		
		1.3	Review the impact of website design on search engine results.	
		1.4	Explain evidence-based support for improving a site's index value and rank through SEO.	
2.	Understand website technologies, tools and software used to	2.1	Explain the concepts of design flexibility, performance, functionality, User Experience (UX) and User Interface (UI).	
	develop websites.	2.2	Evaluate a range of tools and techniques including HTML, CSS, and JavaScript available to design and develop a custom built website.	
		2.3	 Compare cloud website development tools for businesses. 	
		2.4	Evaluate the use of content management systems for website design and maintenance.	
3.	Understand multimedia content creation tools	3.1	Evaluate tools available to create multimedia content for websites.	
	and software.	3.2	Explain regulatory and ethical considerations in creating multimedia content for websites.	
4.	Be able to create a multi-page website	4.1	Create a design document for a branded, multipage website following client and user requirements.	
	using multimedia content.		Create a branded, multipage website supported with realistic multimedia content to follow given design specifications.	
		4.3	Critically evaluate the design and development process	

against design specifications.

Topic	Course coverage
Learning Outcome 1 Learning Outcome 2	 Hosting and website management: Investigate relationships between domain names, DNS services and communication protocols used to access a website. Overview of publishing and managing secure websites, including search engine indexing and ranking. Interaction between browser and server: HTML forms, GET and POST data Different server technologies: Differences between web server hardware, software and host operating systems. Advantages of an integrated database system with regards to expanding website capability. Common web development technologies and frameworks. The main() Function, The #include and #define Directives, The Variable Definition, The Function Prototype, Program Statements, The Function Definition, Program Comments. SQL, Java, JavaScript, C#, C++, Python, PHP, Ruby on Rails. SEO techniques. Developing schemes of user interaction influenced by characteristics of good design, such as: learnability, robustness, flexibility, usability, performance, accessibility, adaptability, customisation Developing dynamic content using PHP (The use of JSP, ASP or Perl is acceptable): Interfacing with a database (limited knowledge of SQL syntax is required to allow iterating over a data set) Standards & conformance: W3C, WAI, CSS. Public & Private key encryption, On the fly encryption, hashes, the uses and limitations of RSA, DES and AES. ISO 9126 characteristics of quality. File sharing & distribution mechanisms: Traditional downloading/uploading, FTP, Bit torrent, P2P networks. Streaming media, RSS, IRC, Wiki, Blog, Web Forum,
	Portals. • Joomla, WordPress, Drupal, etc.
Learning Outcome 3	 InDesign, Adobe Illustrator, Photoshop, Dreamweaver & CorelDRAW. Disability Discrimination Act 1995 (DDA) and the related Special Educational Needs and Disability Act 2001 (SENDA) Web Accessibility Initiative (WAI) from the World Wide Web Consortium (W3C) Lab hours demonstrating InDesign, Adobe Illustrator, Photoshop, Dreamweaver & CorelDRAW use.
Learning Outcome 4	Lab/workplace creation of website.

To achieve a 'pass' for this unit, learners must provide evidence to demonstrate that they have fulfilled all the learning outcomes and meet the standards specified by all assessment criteria.

Learning Outcomes to be met	Assessment criteria to be covered	Type of assessment	Summary of quantity/quality

COMPUTER AND NETWORK TECHNOLOGY

Unit Reference Number	L/617/2268
Unit Title	Computer and Network Technology
Unit Level	4
Number of Credits	20
Total Qualification Time	200 hours
Mandatory / Optional	Mandatory
SSAs	06.1 ICT practitioners
Unit Grading Structure	Pass / Fail

Unit Aims

The aim of this unit is to provide learners with knowledge of computer networking essentials, how they operate, protocols, standards, security considerations and the prototypes associated with a range of networking technologies.

Learners will explore a range of hardware and related software and will learn to configure and install these. A range of networking technologies will be explored including Local Area Networking (LAN), Wide Area Networking (WAN) and how these technologies evolved to form largescale networks. Protocol methodologies related to IP data networks will also be explored.

Learning Outcomes and Assessment Criteria

SOFTWARE DEVELOPMENT

Unit Reference Number	R/617/2269
Unit Title	Software Development
Unit Level	4
Number of Credits	20
Total Qualification Time	200 hours
Mandatory / Optional	Mandatory
SSAs	06.1 ICT practitioners
Unit Grading Structure	Pass

Unit Aims

The aim of this unit is to introduce learners to the fundamental concepts of programming with the emphasis being laid on the whole of the software development process, to include the environment in which software is developed and the tools that assist in this process. Learners are given the choice to use a programming language of their choice.

Learning Outcomes and Assessment Criteria

Learning Outcomes-	Assessment Criteria-		
The learner will:	The learner can:		
Understand the software	1.1 Explain the importance of each stage in traditional		
development lifecycle.	software lifecycle approaches.		
	1.2 Evaluate alternative software development		
	approaches.		
2. Understand the process of	2.1 Evaluate software development techniques.		
software development.	2.2 Evaluate the use of different software development		
	tools.		
	2.3 Evaluate software testing methodologies.		
	2.4 Describe software deployment techniques.		
	2.5 Evaluate methods of reviewing system performance.		
3. Be able to deploy a	3.1 Produce a software development plan from a system		
functional business	design.		
application to meet business	.2 Develop software to meet business requirements.		
requirements.	3.3 Test and deploy software.		
	3.4 Evaluate the software against business		
	requirements.		

Topic	Course coverage		
Learning Outcome 1	Algorithm definition: Writing algorithms to carry out an		
	operation, e.g. Bubble sort.		
	The relationship between algorithms and code.		
	The generation process of code; the roles of the pre-		
	processor, compiler and linker, interpreter.		
	Characteristics of code: Definitions of: data types (the role of		

	 constants/variables), methods (including input/output), control structures, iteration, scope, parameter passing, classes, inheritance and events. Key components of an Integrated Development Environment (IDE).
	 Principles of the traditional Systems Development Life Cycle (SDLC) models, including Waterfall, Prototyping, and Spiral.
Learning Outcome 2	 Analyse a business-related problem and assess possible solutions: Discuss and produce a problem definition statement to highlight and describe the issues that need to be addressed. Research and consider possible solutions and predict the overall success of the application. Produce a Software Design Document: Review and discuss the value of Software Design Documents with regards to application development. Evaluate your possible solutions and synthesise the ideas into a single document that identifies and attempts to solve the business-related problem.
	Research and use information relating to software testing to
Learning Outcome 3	 create a suitable test plan for your business application. Work as a small team to plan and prepare your business application: Peer-review and debate your development plan by effectively communicating and defending the ideas in your Software Design Document. Discuss differences with regards to the possible strengths and weakness of each Software Design Document. Modify your Software Design Document to reflect any new insights or considerations. Prepare and produce a functional business application: Use your Software Design Document with your preferred design and development methodology and your selected tools and techniques to develop a functional business application. Create and quality check appropriate support documents for your application. Undertake a critical review of the performance and development of your application against all identified factors and any adopted design and development methodologies. Evaluate the overall strengths and weaknesses of your business application against its Software Design Document and initial requirements. Discuss and plan in detail possible revisions (including implementation) with regard to improving your application's performance.

To achieve a 'pass' for this unit, learners must provide evidence to demonstrate that they have fulfilled all the learning outcomes and meet the standards specified by all assessment criteria.

Learning Outcomes to be met	Assessment criteria to be covered	Type of assessment	Summary of quality/quantity
LO1, LO2 , LO3	All ACs under LO1, LO2, LO3	Coursework + Computer Lab	2500 words

MANAGING BUSINESS INFORMATION

Unit Reference Number	J/617/2270	
Unit Title	Managing Business Information	
Unit Level	4	
Number of Credits	20	
Total Qualification Time	200 hours	
Mandatory / Optional	Mandatory	
SSAs	06.1 ICT practitioners	
Unit Grading Structure	Pass / Fail	

Unit Aims

The aim of this unit is to show how communications, knowledge and information can be improved within an organisation including making better use of IT systems. Learners will understand the interaction between communications, knowledge and information. The unit also explores how IT systems can be used as a management tool for collecting, storing, disseminating and providing access to knowledge and information.

Learning Outcomes and Assessment Criteria

Learning Outcomes-	Assessment Criteria-		
The learner will:	The learner can:		
Understand how to assess information and knowledge	1.1 Summarise the typical business decisions made by organisations.		
needs of an organisation.	1.2 Evaluate the information and knowledge needed to ensure effective decision making.		
	1.3 Assess internal and external sources of information required.		
2. Understand communication processes in an organisation.	2.1 Report on existing processes of communication in an organisation.		
	2.2 Determine benefits and limitations of existing communication processes.		
	2.3 Justify areas of improvement for communication processes.		
Be able to improve systems relating to information and knowledge.	3.1 Report on existing approaches to the collection, formatting, storage and dissemination of information and knowledge in an organisation.		
	3.2 Recommend a strategy to improve the collection, formatting, storage and dissemination of information and knowledge.		
	3.3 Implement an improvement to access of information and knowledge in an organisation.		

Topic	Course coverage		
Learning Outcome 1	Sources: internal and external, primary and secondary,		
	formal and informal, team workers, customers and other		

	 stakeholders. Types: qualitative and quantitative, tacit and explicit, official and unofficial, policy and opinion.
Learning Outcome 2	 Types: meetings and conferences, workshops and training events, internet and email, written, telephone, video conferencing, one-to-one meetings. Approaches: structured and coordinated, planned, formal and informal. Strategy: advantages, disadvantages; informal, face-to-
	face, formal in writing, emotional, intelligence.
Learning Outcome 3	 Type: hard and soft, websites and mailings, access and dissemination. Style: trends and patterns, diagrams and text, consistent and reliable, current and valid; legal and confidential. An awareness of current UK national and international legislation including Data Protection Act 1998, Computer Misuse Act 1990, equal opportunities, Health and safety. Current EU approaches to tendering; copyright and licensing issues.

To achieve a 'pass' for this unit, learners must provide evidence to demonstrate that they have fulfilled all the learning outcomes and meet the standards specified by all assessment criteria.
